Amendments to the Specification

Please add the following paragraph between paragraphs [0023] and [0024]:

[0023.5]   Figure 4 is a flowchart that illustrates the main method steps implemented by a multi-party embodiment of the invention to enable information extracted from a sent for to be transmitted to a requesting agency.

Please amend paragraph [0056] as follows:

[0056]   Figure 3 illustrates the multi-party embodiment of the invention, in which the sender 100 is a contractor who is formally employed by an agency 500 (who, in this embodiment, constitutes the primary intended recipient of reported form data), but performs work at the site of or for a client 600, who pays the agency for the services of the contractor. The premise of this example is that the contractor/sender 100 is to report the time he has worked in such a way that not only the agency will see the report, but also so that the client will be able to ensure correct billing, among other possible tasks such as making comments. Recall that this is but one possible scenario of a multi-party configuration according to the invention. One alternative already mentioned is where the agency is a general contractor and the sender is a sub-contractor. Figure 4 is a flowchart that illustrates how the agency may access at least certain allowed portions of the information submitted by a sender. The various illustrated steps are described below.
